Universal Pallet Rack Drop Pin

The Universal Pallet Rack Drop pin is easy to install and is compatible with a wide range of pallet rack brands. Our Universal Drop Pin, or PRC001, has been independently tested and found to exceed ANSI/RMI's strength requirements.

Meet Warehouse Safety Requirements

ANSI/RMI 16.1 Section 5.4.2 states that "...a locking device that prevents disengagement of the shelf beam when subjected to a 1000 lbs vertical uplift force. It is important that the locking devices be properly installed and remain engaged."

Pallet Rack Safety Drop Pin Function

The Universal Pallet Rack Drop Pin provides an easy, cost-effective way to help prevent pallet rack accidents in the warehouse. Without safety clips, lift truck operators can accidentally dislodge beams from the racking. This can cause costly damage to product and threaten the safety of personnel. We commonly hear from businesses who installed safety drop pins only after an accident had occurred. Be proactive and outfit your warehouse with drop pins before an incident takes place.

Product Specifications

Length: 2.52"

Width: .29" cylinder, .73" head

Weight: .07 lb

Finish: Zinc
